Sed Overview

Sed is a streamlined, noninteractive editor. It allows you to perform the same kind of editing tasks used in the vi and ex editors. Instead of working interactively with the editor, the sed program lets you type your editing commands at the command line, name the file, and then see the output of the editing command on the screen. The sed editor is nondestructive. It does not change your file unless you save the output with shell redirection. All lines are printed to the screen by default.

Objectives

This tutorial will teach you how to write sed commands that will be used on your Linux server. Before getting started, make sure you know the filename and where it is in the Linux directory.

 cd /directory/file

```

Example of command line code

8: Change Minerva McGonagall's birthday to 12/25/1960 . Assume you don't know Minerva's original birthday. Use a regular expression to search for it..✓

i sed '/Minerva McGonagall/s#[0-9][0-9]*/[0-9][0-9]*/[0-9][0-9]#12/25/60#g'
SedLab

- sed is the command.
- After Minerva McGonagall we want to substitute a birthday we don't know. So look for any number between 0-9.
- Changing it to date given keeping in mind date format mm/dd/yy.
- g is for global
- SedLab is the file we are using.

```
